FINAL EVIDENCE AUDIT - COLLECTION COMPLETE

TRDGO-US SMART MOVE V2 - REAL-DATA EVIDENCE AUDIT

Generated 2026-11-02 04:07 UTC | 08:07 Dubai | 23:07 EST New York | V2 v2-exp-2 (EXPERIMENTAL, config 16b9b2e149) | audit hash f48bd9d40b9d4ac5

Read-only snapshot of the collector's store; no provider request was made for this audit.

1. Collection progress and universe reconciliation

Universe at start	Collected + audited	Expired before collection	Not reached yet	Attempts / cap	Failed calls	401/429
116	95	21	0	512 / 700	6	0

Run status: **COMPLETED: OK**. Kill switch: ENGAGED. Expired (window closed before the stock was reached or before collection): MAR, ETR, IDXX, PEG, EL, L, TSEM, CHKP, TEM, CNA, FOXA, KRYS, AXSM, CHH ....

2. V2 evidence out of 100 (95 stocks)

Average available	Average directional	100/100	80-99	60-79	< 60	>= 60 directional
47.5 / 100	**37.9** / 100	0	5	46	44	**5** of 95

Available = points that have data. Directional = points from factors able to carry a bull/bear direction (the implied-move factor is magnitude-only and excluded). A BUY/SELL needs 60 directional points. No score is normalised to 100.

Factor	Pts	Full data	Partial	Missing	Main cause of the gap
F3	15	51	0	44	stale calendar at capture
F5	10	53	0	42	stale calendar at capture
F7	10	53	0	42	stale calendar at capture
F8	5	53	0	42	stale calendar at capture
ANALYST	15	0	93	2	insufficient history
OPTIONS_FLOW	15	7	0	88	filtered by rule
IMPLIED_VS_HIST	10	91	0	4	insufficient history
SHORT_INST	5	93	0	2	insufficient history
REL_STRENGTH	5	95	0	0	-
NEWS_GUIDANCE	10	0	0	95	unverified semantics

3. Current V2 signals (stocks audited so far)

Variant	BUY	SELL	NO TRADE	DATA INCOMPLETE
Continuation	0	0	5	90
Contrarian	0	0	5	90

Why stocks cannot produce BUY/SELL: 45 x directional evidence 55 < 60 (missing: ANALYST, NEWS_GUIDANCE, OPTIONS_FLOW); 20 x blocked by V1 eligibility gate (ILLIQUID_OR_UNKNOWN, NOT_TRADABLE, OUT_OF_WINDOW, UNKNOWN_TIMING) - calendar was 8.4 h old at capture (limit 6 h); 18 x blocked by V1 eligibility gate (ILLIQUID_OR_UNKNOWN, NOT_TRADABLE, OUT_OF_WINDOW, UNKNOWN_TIMING) - calendar was 7.7 h old at capture (limit 6 h); 5 x 60+ directional points but evidence below the BUY/SELL margin; 3 x blocked by V1 eligibility gate (ILLIQUID_OR_UNKNOWN, NOT_TRADABLE, OUT_OF_WINDOW, UNKNOWN_TIMING) - calendar was 6.3 h old at capture (limit 6 h); 2 x directional evidence 40 < 60 (missing: ANALYST, F3, NEWS_GUIDANCE, OPTIONS_FLOW); 1 x directional evidence 50 < 60 (missing: ANALYST, NEWS_GUIDANCE, OPTIONS_FLOW); 1 x blocked by V1 eligibility gate (ILLIQUID_OR_UNKNOWN, NOT_TRADABLE, OUT_OF_WINDOW, UNKNOWN_TIMING) - calendar was 9.4 h old at capture (limit 6 h). Accuracy: NOT AVAILABLE: no actual outcomes exist; no accuracy is claimed.

DATA QUALITY, LOOKAHEAD AND NEXT STEPS

4. API failures and data-quality problems

Failed calls: **6** (transient provider errors after one retry; no 401/429). Stocks: HLF, OGS, SNDX By endpoint: {'uw_analysts': 94, 'uw_estimates': 94, 'uw_flow_alerts': 94, 'uw_short_float': 94, 'uw_inst_own': 94, 'uw_news': 3}.

5. Missing-data root causes

Factor	Cause category (stocks)	Meaning
ANALYST	INSUFFICIENT HISTORY (93)	estimate-revision half has no prior consensus snapshot (needs a second snapshot 7+ days later)
ANALYST	API FAILURE (2)	the provider call failed after retries (transient errors)
NEWS_GUIDANCE	UNVERIFIED SEMANTICS (95)	headline `sentiment` meaning is unverified (all 25 sampled headlines read neutral); guidance has no structured field
OPTIONS_FLOW	FILTERED BY RULE (79)	100 alerts returned, but fewer than 3 passed the rules (single-leg, expiry on/after earnings, volume/OI >= 1, within 5 days) or attributed premium < $500k: thin options activity around earnings
OPTIONS_FLOW	GENUINE ABSENCE (8)	the provider returned no flow alerts for this stock
OPTIONS_FLOW	API FAILURE (1)	the provider call failed after retries (transient errors)
F3	STALE CALENDAR AT CAPTURE (42)	the earnings calendar was older than 6 h when this stock was captured (single refresh at 10:38 UTC), so the frozen V1 freshness/eligibility rule invalidated the V1 evidence at capture time
F3	V1 EVIDENCE GAP (2)	V1 evidence for this factor was missing at capture (insufficient history or not captured live in the window)
F5	STALE CALENDAR AT CAPTURE (42)	the earnings calendar was older than 6 h when this stock was captured (single refresh at 10:38 UTC), so the frozen V1 freshness/eligibility rule invalidated the V1 evidence at capture time
F7	STALE CALENDAR AT CAPTURE (42)	the earnings calendar was older than 6 h when this stock was captured (single refresh at 10:38 UTC), so the frozen V1 freshness/eligibility rule invalidated the V1 evidence at capture time
F8	STALE CALENDAR AT CAPTURE (42)	the earnings calendar was older than 6 h when this stock was captured (single refresh at 10:38 UTC), so the frozen V1 freshness/eligibility rule invalidated the V1 evidence at capture time
IMPLIED_VS_HIST	INSUFFICIENT HISTORY (4)	fewer than 4 reported post-earnings moves, or no implied move in the saved earnings payload

6. Timestamp and lookahead checks

Evidence records checked	473, all retrieved by the governed collector
Retrieved outside the capture window	0 (PASS)
Rows stamped after retrieval	0 records (PASS) (analyst, flow, short interest, ownership, news fields)
No fabricated or normalised points	0 violations (PASS): missing factors contribute 0; bull + bear never exceed points with data

7. Prioritised fixes and historical-data requirements

Fixable now: Retry the 6 failed calls (OGS and others) once more after the run ends, within the remaining budget | Stocks not yet reached: finishing automatically within the cap and window | Nothing else can be fixed locally: the missing points are history or semantics, not parsing
Needs future snapshots or verification: Analyst consensus revisions (10 pts): second consensus snapshot at least 7 days after the first | Short-interest change: newest settlement is already available; 13F net change: re-collect after the 14 Nov filing deadline | News/guidance (10 pts): verify the headline sentiment field on a labelled sample or define a structured guidance field | Options flow on thin names: only more activity close to earnings can fill it

8. Remaining collection and next steps

0 stocks not yet reached; the collector continues automatically within the 700-attempt cap, the hourly share and each stock's capture window. When it ends: final V2 scoring, tests, build and the final two-page audit. No recurring job is active; no outcome request has been made.
