TRDGO-US SMART MOVE - EARNINGS PREDICTION AUDIT

Generated 2026-11-02 10:10 UTC | 14:10 Dubai (GST) | 05:10 New York (EST)
Run **run_20261101_full_universe** | data: **REAL** | evidence timestamp 2026-10-31T21:54:03.591707+00:00 | audit hash ea5ca230f87d651c

1. Event and models

Earnings event	Timing	Model	Points	Status
2026-11-02	AMC 100 / BMO 22	V1 (frozen)	40	**READY - shadow research, no accuracy claim**
		V2 (experimental)	100	**UNAVAILABLE - EXPERIMENTAL / UNAVAILABLE for decisions**

2. Universe

Calendar	Eligible	Evaluated	Pending	Incomplete	Excluded (removed)
123	122	122	0	23	1 APPS

3. Signals (V1; Continuation and Contrarian are scored separately)

Variant	BUY	SELL	NO TRADE	DATA INCOMPLETE	PENDING
Continuation	**8**	**7**	**84**	**23**	0
Contrarian	**8**	**21**	**70**	**23**	0
V2 Continuation (exp.)	0	0	5	**90**	0
V2 Contrarian (exp.)	0	0	5	**90**	0
V2 candidate Continuation (research)	0	0	5	**90**	0
V2 candidate Contrarian (research)	0	0	5	**90**	0

Evidence coverage: complete (40/40): 112 | partial: 10. Missing data is shown as DATA INCOMPLETE, never as a neutral or negative signal.
Actual outcomes: **0 graded**. NOT AVAILABLE (no graded outcomes yet; no accuracy is claimed)

4. Top predictions (highest bullish/bearish points; engine rule met, no gate)

Symbol	Variant	Signal	Points	Evidence	Reason
VAL	continuation	**BUY**	30 pts	40/40	RULE (V1 rule met, no gate)
RIG	continuation	**BUY**	26 pts	40/40	RULE (V1 rule met, no gate)
HLF	continuation	**BUY**	26 pts	40/40	RULE (V1 rule met, no gate)
ICHR	continuation	**SELL**	34 pts	40/40	RULE (V1 rule met, no gate)
AESI	continuation	**SELL**	24 pts	40/40	RULE (V1 rule met, no gate)

Model disagreements (Continuation BUY vs Contrarian SELL or the reverse): **0**
V1 (original, Oct 31 capture) to V2 (new capture) signal changes: continuation: BUY->NO_TRADE 8, NO_TRADE->NO_TRADE 80, SELL->NO_TRADE 7 | contrarian: BUY->NO_TRADE 6, NO_TRADE->NO_TRADE 68, SELL->NO_TRADE 21; no opposite BUY/SELL pairs.

5. Provider freshness and readiness

V2 collection (one-time, real provider): **94 stocks**, 512 attempts of cap 700, run OK, last collection **2026-11-01T20:00:15.361738+00:00**, kill switch engaged.
Latest evidence retrieved: **2026-10-31T21:54:03.591707+00:00**. V1 run: 2026-10-31T21:54:48.026697+00:00 (OK), 455 attempts of cap 700 (65.0%), 0 errors, 0 401/429 stops.

PARTIAL **Readiness: PARTIAL.** (1) No outcome has ever been collected or graded; accuracy is unknown. (2) collector design: single calendar refresh: the one-time V2 run refreshed the earnings calendar once (10:38 UTC); 41 stocks were captured more than 6 h later, so the frozen freshness rule invalidated their V1 evidence at capture time.

Shadow research only. Not investment advice. No broker connection or order is possible from this system.

TECHNICAL VALIDATION AND PROBLEM AUDIT

1. V2 factor coverage (all 10 parameters)

Factor	Pts	Stocks with data	Data	Note (endpoints are in the JSON record)
F3	15	51 / 95	READY	saved in every run
F5	10	53 / 95	READY	saved in every run
F7	10	53 / 95	READY	collected live in window only
F8	5	53 / 95	READY	saved in every run
ANALYST	15	93 / 95 (93 part.)	PARTIAL	actions (5 pts) collected; revisions (10 pts) need a 2nd snapshot
OPTIONS_FLOW	15	7 / 95	PARTIAL	collected; few stocks pass the activity rules
IMPLIED_VS_HIST	10	91 / 95	PARTIAL	magnitude only, no direction
SHORT_INST	5	93 / 95	PARTIAL	collected; FINRA lagged, 13F partial
REL_STRENGTH	5	95 / 95	READY	overlaps V1 F5/F8 evidence
NEWS_GUIDANCE	10	0 / 95	BLOCKED	no structured guidance field

V2: at most 80 of 100 points have data (70 directional; 60 required, and the implied-move factor is magnitude-only so it does not count). Averages 47.5 available / 37.9 directional; 5 stocks reach 60 directional. V2 results: continuation DATA_INCOMPLETE 90, NO_TRADE 5; contrarian DATA_INCOMPLETE 90, NO_TRADE 5. Missing is not negative.

2. Provider requests, capture windows, liquidity

Item	Value
Attempts / by provider	455 attempts (UNUSUAL_WHALES 455) | errors 0 | 401/429 0 | budget 65.0% of cap 700
V2 collection	94 stocks | attempts 512 of 700 | probe AAPL: analysts OK, estimates OK, flow_alerts OK, short_float OK, inst_own OK, news OK | failed calls 6 | 401/429 0 | open-window events 116; expired before collection 21
Subscription / limits	ACTIVE (all 6 V2 endpoints answered with data on 1 Nov; no 401); renewal and dashboard quota NOT VERIFIED. 3 in-flight per token (UW support, 23 Oct): not re-verified; run used 1 in flight, 2 s pacing
Windows / liquidity (V1)	windows: evaluated 122, open without prediction 0, closed and missed 0. NOT_TRADABLE: 22 | ILLIQUID_OR_UNKNOWN: 42 | INSUFFICIENT_COVERAGE: 1

3. Outcomes, accuracy, V1 versus V2

Outcomes graded	0. Accuracy: NOT AVAILABLE (no graded outcomes yet; no accuracy is claimed)
V1 vs V2	INCONCLUSIVE: minimum sample (100 decided per variant for both models over 8+ earnings weeks) not met

3b. V2 research candidate and evidence findings

Candidate v2c-1	RESEARCH ONLY. Weights, thresholds, factor rules and the 100 points are identical to the frozen V2; no redistribution. It only names WHY a stock is incomplete: Continuation BUY 0, SELL 0, NO TRADE 5, DATA INCOMPLETE 90 (missing required 47, stale calendar 42, api failed 1). Accuracy NOT VERIFIED.
Analyst history	longest saved consensus history 13.3 h, 0 of 116 stocks changed: below the 7-day band, so the revision factor stays unavailable (nothing manufactured).
Flow lookback	point-in-time backtest on 4625 past events: qualifying events at 5/10/15/30 d = 3/3/6/12; decided <= 8, far below 100: INCONCLUSIVE
News / guidance	56 saved labels, all neutral: meaning undocumented, factor stays BLOCKED and unscored.

4. Operations and tests

Scheduler	PLAN ONLY; recurring live collection disabled; no task registered; est. 503 requests/day for this universe
Kill switch / health / backup	kill switch **ENGAGED** | health checks **PASS** | backup VERIFIED: run_20261101_full_universe_20261101T095303Z (515 files)
Tests	Smart Move suite 171 passed / 1 skipped / 0 failed (2026-11-02); frontend tsc + production build clean; main-repo backend suite 1262 passed / 4 skipped (clean baseline, 2026-11-01). Recorded by the developer run, not re-executed by the audit.

5. Defects and required actions

Sev.	Component	Defect	Required action
HIGH	outcomes	No outcome has ever been collected or graded; accuracy is unknown	Run outcome collection after the reaction sessions close (needs separate live approval)
HIGH	tests	collector design: single calendar refresh: the one-time V2 run refreshed the earnings calendar once (10:38 UTC); 41 stocks were captured more than 6 h later, so the frozen freshness rule invalidated their V1 evidence at capture time	refresh the calendar at least every 5 h inside any future collection run (the tick/full runners must schedule it)

+3 further item(s) not shown here (lower severity, listed in the JSON audit record): scheduler: scheduler_tick --execute is tested with mocks only; never run live; provider: Subscription, renewal (1 Nov) and 3-concurrent limit not re-verified t; tests: worktree backend/tests (6 files): fail only in the feature/smart-move

PARTIAL	**Final readiness verdict: PARTIAL** - live activation is not approved. Reasons: No outcome has ever been collected or graded; accuracy is unknown; collector design: single calendar refresh: the one-time V2 run refreshed the earnings calendar once (10:38 UTC); 41 stocks were captured more than 6 h later, so the frozen freshness rule invalidated their V1 evidence at capture time
