Scoring Parameters

The weighted parameters behind each 0-100 score. Each parameter gets a bias in -1..+1 (bearish..bullish); points = bias x weight; score = 50 + (net / present) x 50, clamped 0-100, where net is the sum of points for parameters that returned data and present is their weight.

Decision cuts - Earnings Trade: STRONG BUY >= 80, BUY >= 65, NO TRADE 35-65, SELL <= 35, STRONG SELL <= 20. My Calls: BUY >= 58, SELL <= 42 (no STRONG). Options straddle: STRADDLE >= 58, else NO TRADE.
