TECHNICAL VALIDATION AND PROBLEM AUDIT

1. V2 factor coverage (all 10 parameters)

Factor	Pts	Stocks with data	Data	Source / endpoint	Note
F3	15	117 / 122	READY	UW /api/earnings/{t} + /ohlc/1d	saved in every run
F5	10	122 / 122	READY	UW /api/stock/{t}/ohlc/1d	saved in every run
F7	10	116 / 122	READY	UW /volatility/context + /iv-rank	collected live in window only
F8	5	122 / 122	READY	UW ohlc SPY + sector ETF	saved in every run
ANALYST	15	0 / 122	PARTIAL	UW /api/screener/analysts; /companies/{t}/earnings-estimates (current only)	rating actions only; estimate revisions need dated snapshots
OPTIONS_FLOW	15	0 / 122	PARTIAL	UW /api/stock/{t}/net-prem-ticks, /flow-alerts	adapter built; never collected, no history saved
IMPLIED_VS_HIST	10	115 / 122	PARTIAL	UW /api/earnings/{t} (expected_move_perc, post_earnings_move_1d)	ratio is READY from saved data; direction undefined, magnitude only
SHORT_INST	5	0 / 122	PARTIAL	UW /api/shorts/{t}/interest-float/v2, /institution/{t}/ownership	never collected; FINRA/13F data is delayed
REL_STRENGTH	5	122 / 122	READY	derived from saved ohlc (stock, SPY, sector ETF)	overlaps V1 F5/F8 evidence
NEWS_GUIDANCE	10	0 / 122	BLOCKED	UW /api/news/headlines (sentiment field semantics unverified)	no structured guidance field

V2: at most 55 of 100 points have data, of which 45 are DIRECTIONAL (60 required; the implied-move factor is magnitude-only and does not count). Every V2 result is DATA INCOMPLETE. Missing is not negative.
